

AN ECO SLEEPING-SYSTEM

WITH ECOPET™ INSULATION

+

ECOCIRCLE™ fibers

We can make a difference because we can...

ECOPET™ and ECOCIRCLE™ FIBERS are two renowned environmentally friendly programs implemented by Teijin Fibers Limited taking advantages of the company's advanced recycling technology.

Hong Kong Non-Woven is extending the program to a new milestone, introducing a highly eco-friendly sleeping system with their ECOPE™ insulation along with ECOCIRCLE™ FIBERS generated shell and lining fabrics. This is an eco sleeping system with astounding performance, including **responsible manufacturing** and **waste management** throughout the entire supply chain. Hong Kong Non-Woven is also pledged to support the program in creating incentives to retailers to foster the collection effort in blossoming the recycling program after use.

Why ECOCIRCLE™ FIBERS?

Teijin Fibers Limited has made a breakthrough in its material recycling system, which makes it possible to separate and eliminate additives and colorants not only from PET bottles but also from other polyester products, and also purifies the material to an extent whereby the quality is equivalent to that of polyester from petroleum.

As a result, products that have the same quality, functionality, and feel of those produced from virgin polyester are now manufactured using recycled polyester fibers.

Why ECOPE™ recycled Insulation?

- **Resin-Free Construction**
- **100% Recycled Polyester Content**
- 0.92 CLO/oz/yard
- Hypoallergenic
- High Loft & High Resiliency

TODAY...

The system encompasses the following areas:

- Working Wear
- Office Wear
- Interior
- Household Goods
- Industrial Materials
- Civil Engineering materials

TOMORROW:

The sleeping system can be adopted in your product range.
