

## PRESS RELEASE

Hong Kong, February 6<sup>th</sup> 2010

*HK Non-Woven develops the Thermal R Eco™ for Marmot®, a technically advanced recycled insulation using Advansa's ThermoCool™ Eco performance fibers for outdoor apparel*

HK Non-Woven developed the Thermal R Eco™ for Marmot, an innovative and technically advanced recycled insulation use ThermoCool™ Eco performance fibers from Advansa for outdoor apparel, reflecting a three way partnership to create innovative, functional and sustainable product.

The Thermal R Eco™ insulation is designed to optimize the body's natural thermoregulation through the innovative design of the fiber cross section. It thus provides maximum warmth yet at the same time reduces the adverse effects of perspiration and condensation whilst providing the maximum comfort. The wearer therefore is not just kept warm but also dry from perspiration, condensation and humidity that occur inside the garment in extreme climatic conditions.

As the global consumer markets demand for more moves towards sustainability and recycled products which have a lesser negative environmental impact on the planet, recycled insulation for outdoor market is making a mark in the goal towards reaching greater sustainability. Innovative brands such as Marmot® are fast recognizing these trends and capitalizing them with the development and technical products offered by HK Non-Woven and Advansa.
